
Datasheet

This master datasheet goes together with the also available master box and has been created within the framework of the Datemats project. The most relevant conclusions on how to facilitate the understanding, shaping and application of the EM&Ts was captured in this datasheet. Its structure, concepts, parameters and glossary are based on processes that emerged during the activities and inputs carried out during the project on the part of experts, students, and companies.

The aim of this datasheet is to be filled out by any company or practitioner as a user guide and serves as an informative, didactic, technical and inspirational document including the description of a selected material. For more information and inspiration on how to fill in the empty spots please visit www.datemats.eu where you can find the 20 specific datasheets (5 for each of the EM&Ts) that were created during the Datemats' project lifetime. There you will also find current case studies of different products and sectors used with the respective materials of each EM&Ts whenever available.

It is important to stress that all specific content collected in the subsequent versions of the datahseets that the stakeholders may introduce will not be related in any manner to the results of the Datemats project.
